

This is an example showing you how to convert PDF figures generated by tikz to PNG via ImageMagick:

The plot in this chunk is converted to PNG:

```
(x = rnorm(20))

## [1] -0.56048 -0.23018 1.55871 0.07051 0.12929 1.71506
## [7] 0.46092 -1.26506 -0.68685 -0.44566 1.22408 0.35981
## [13] 0.40077 0.11068 -0.55584 1.78691 0.49785 -1.96662
## [19] 0.70136 -0.47279

par(mar = c(4.5, 4, 0.1, 0.1))
hist(x, main = "", xlab = "$x$ (how the fonts look like here?)",
      ylab = "$\\hat{f}(x) = \\frac{1}{nh} \\sum_{i=1}^n \\cdots$")
```

This chunk uses the PDF device, and it is not converted:

```
par(mar = c(4.5, 4, 0.1, 0.1))
plot(x, pch = 19)
```
